Phishing Email Investigation Report

1. Executive Summary

This report documents a full phishing email investigation including header analysis, domain and URL analysis, IP reputation checks, and social engineering evaluation. Multiple indicators confirm the email as a phishing attempt.

2. Scope & Tools Used

Tools Used:
- MXToolbox (Header & Blacklist)
- VirusTotal (URL Reputation)
- urlscan.io (Behavior Analysis)
- DNS Lookup
- Manual Analysis

Approach: Combination of automated tools and analyst-driven investigation.

3. Email Header Analysis

SPF: Fail
DKIM: Fail
DMARC: Fail
Sender IP: 57.128.69.202

Conclusion: Authentication failure indicates spoofed sender.

4. Domain & Email Analysis

From: serenitepure.fr
Reply-To: aichakandisha.com
Return-Path: dturm.de

Conclusion: Domain mismatch indicates spoofing.

5. URL Analysis

URL: http://go.nltrck.com/
- Redirect behavior detected
- Hosted on AWS
- VirusTotal: Clean (0/95)

Conclusion: Suspicious tracking/redirect link despite clean reputation.

6. DNS & Infrastructure Analysis

Resolved IPs: 44.235.1.38, 50.112.118.65
Hosting: Amazon AWS

Conclusion: Cloud hosting commonly abused in phishing campaigns.

7. IP Reputation Analysis

IP: 57.128.69.202
Blacklist: Listed on UCEPROTECTL3

Conclusion: IP associated with spam/malicious activity.

8. Social Engineering Analysis

Techniques:
- Urgency (Act now)
- Financial pressure
- Attractive offer
- Mass targeting

Conclusion: Classic phishing persuasion techniques.

9. Indicators of Compromise (IOCs)

IP: 57.128.69.202
Domains: serenitepure.fr, aichakandisha.com, dturm.de
URL: go.nltrck.com

10. MITRE ATT&CK Mapping

T1566.002 – Phishing (Spearphishing Link)
T1204 – User Execution
T1071 – Application Layer Protocol

11. Risk Assessment

Overall Risk: HIGH
Reason: Multiple strong phishing indicators across all layers.

12. Recommendations

User:
- Do not click unknown links
- Verify sender identity

Organization:
- Enable SPF/DKIM/DMARC
- Deploy email security tools
- Conduct phishing awareness training

13. Conclusion

The email is confirmed as phishing due to authentication failures, domain mismatch, suspicious links, and blacklist presence. This demonstrates a real-world phishing attack scenario.
